

DDA Strategy 1 — Long-Request Performance: Pool T vs Balanced Static

Same static configs used in Strategy 1 short-request comparison

(a) TTFT vs Seqlen — Long Requests (seqlen > 512)
Same balanced static as Strategy 1 comparison (PP=4,TP=2 / PP=2,TP=10 / PP=2,TP=16)

(b) Throughput vs Seqlen — Long Requests (seqlen > 512)
Shaded = Pool T throughput gain over balanced static
7B: ~1× (negligible), 13B: ~3×, 70B: ~4×

— Balanced static (same config as Strategy 1 comparison)
 — Llama2-7B — static PP=4,TP=2 | Pool T PP=32,TP=1 N_T=6
 - - - Llama2-70B — static PP=2,TP=16 | Pool T PP=80,TP=1 N_T=20
 ⋯ 5s SLO
— DDA Pool T (PP=max_layers, TP=1, N_T devices)
 - - - Llama2-13B — static PP=2,TP=10 | Pool T PP=40,TP=1 N_T=14
 - - - 1s SLO
